How we can help your pharmacy business

Omnicell work with pharmacists to drive financial efficiency, improve patient experience, and improve the patient's safety, through the reduction of medication errors.

Our goal is to remove manual processes and waste from your dispensing operations, so your teams can focus on delivering the revenue-generating clinical services you want to offer.

Pharmacy automation delivers safe and secure medication management, ensuring that the right medication and dose is delivered to the right patient at a time that's convenient for them.

We employ pharmacists to stay in step with our customer's challenges and legislation changes. So when it comes to integrating our new solutions into your existing workflows, we offer hands-on support, best practice guidance and change management expertise.

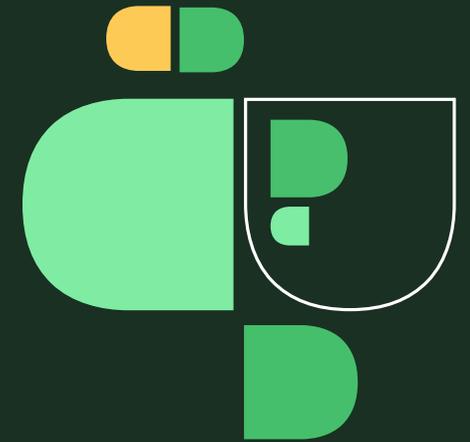

Staff time Dispensing errors
 Long queues Financial stress
 Regulation Patient safety
 Manual processes Limited space
 Online pharmacies Compliance
 Increased competition
 Expired medication Staff burnout
 Increased workload Wrong inventory
 Stock shortages

Your journey to pharmacy automation

With ever-increasing patient demands, rising costs and narrowing margins, we know that community pharmacies are looking to technology to see how they can do more with less. That's why we have developed a 'journey to automation', which sets out four key steps to automating your pharmacy.

We know that every pharmacy business is different, so you may want to focus on a specific area first. That's why we'll help you identify the workflows that will benefit most from automation, giving you the quickest return on investment.

STOCK MANAGEMENT & PACK HANDLING

MDS PACK FILLING AND CHECK

PRESCRIPTION COLLECTION

MEDICATION ADMINISTRATION WITH CARE HOMES

Stock management and pack handling

Do you have bulging shelves and piles of medication making stock takes difficult? Are your staff wasting time searching for medication they need to fulfil a prescription?

With our pack picking robot you can automate the management of medication packs, from delivery to storage and dispensing. With the robot busy working, your staff are freed up from time-consuming tasks like unpacking medication and rotating stock.

When medication arrives at the pharmacy, software can provide immediate FMD verification and simple automation, meaning the loading and storage of your medication is completely automated.

Fully agnostic software is integrated into any system and a simple dashboard shows you what medication you are storing, wasting, and administering every day.

Our solutions

The Medimat Robotic Medication Pack Dispensing System delivers seamless loading, storage, and safe dispensing of medication packs. Medication is sorted, identified, automatically loaded, and then picked by the robot for dispensing to the pharmacy counter.

We'll help you configure your robot from our flexible range of loading and dispensing options. Pick from the SpeedBox for rapid dispensing of fast-moving items, the Fill-in-Door to place priority items into stock with ease, and the Fill in Box for fully automated loading of bulk pack orders.

Challenges

- Limited space
- Over stocked shelves
- Stock outs / waste
- Manual stock count
- Staff time

Benefits

- Save space
- Eliminate overstocking
- Stop expired waste
- Reduce human error

Outcomes

- More face-to-face patient contact
- Dispense more prescriptions, faster
- Build a resource-efficient business
- Increase patient satisfaction

MEDIMAT ROBOTIC MEDICATION
PACK DISPENSING SYSTEM

MDS pack filling and check

Filling and checking Monitored Dosage System (MDS) packs by hand is time-consuming and takes you away from revenue generating services.

Using automation to do this job for you saves time and ensures your patients receive the right medication, at the right time.

Filling multiple dose packs using our robotic technology enables you to prepare adherence packs for your patients, with very few manual steps.

By linking automated packing to your Pharmacy Management System (PMR) you will know exactly what medication you have packed, for which patient and when.

COMING SOON!

The **VBM Efficiency Booster App** unleashes the power of advanced analytics, providing you with a birds-eye view of your operations and game-changing insights to ramp up the productivity of your instruments.

Our solutions

We offer two robotic solutions to replace your manual pack filling and checking processes.

The VBM 200F is the only system worldwide that accurately fills, checks and corrects SureMed® medication blister cards, with its vision check technology to reduce checking time and limit errors. Capable of up to 40 sealed and checked cards per hour, regardless of the number of pills per blister, the VBM is perfect for pharmacies looking to scale their MDS business.

The JVM 208 is the perfect starting point for MDS pack filling automation and comes at a lower price point. It's ultra-compact, at less than 1 meter wide, and available in two models (Blister or Pouch). The JVM fills up to 10 cards unsupervised.

Challenges

- Too much time spend preparing MPS packs
- No time for revenue generating activities
- High risk of errors
- Time-consuming manual checks

Benefits

- Prepare and fill more packs in less time
- Automated pouch or pack filling
- Connect machines to speed up output
- Seamless active workflow
- Clearly marked with day and time

Outcomes

- Fewer dispensing errors
- Competitive advantage to scale business
- Safer automated vision check available

Prescription collection

Making sure your patients receive their medication on time is a critical step in ensuring they stick to their regime. Dispensing can be time-consuming for you, and inconvenient for your patients, especially during peak times.

With an automated prescription-collection system your patients pick up their medicines whenever it's most convenient for them.

No more queues or wasted journeys to check their medicines are ready. Your patients simply input a unique number to automatically dispense their medication - making prescription collection safe, convenient, and simple: 24-hours a day.

Our prescription collection kiosks provide a simple and secure way to make your dispensing process more efficient, whilst giving your patients the best possible experience.

Our solutions

The Pharmaself24 Automated Prescription Collection Solution can be customised to fit into your pharmacy workflow, enabling you to offer a 24/7 safe and secure collection service.

Available in two core models - the larger Multi and the smaller Compact - the Pharmaself24 can be customised to fit the exact needs of your pharmacy or dispensing GP environment.

Challenges

- Patient adherence
- Getting medication to vulnerable patients
- Reducing waiting times
- Busy workloads of pharmacy staff

Benefits

- Patients collect medication at their convenience
- Spend more time with your patients
- More time for home deliveries for vulnerable patients

Outcomes

- A great differentiator from your competition
- Lock in your patients with 24/7 convenient collection
- Free up valuable staff resources for more profitable services

PHARMASELF24 MULTI

PHARMASELF24 COMPACT

Medication administration with care homes

You know the risks associated with medication adherence in care homes - factors which are made worse in most care facilities by time consuming paper-based medication audits, poor record keeping and missed signatures.

We offer a safe, simple and compliant eMAR system for your pharmacy and care home customers.

Using electronic medication administration records, we ensure every care home resident receives the right medication at the right time, safely and easily, administered using scanned barcodes generated by your pharmacy.

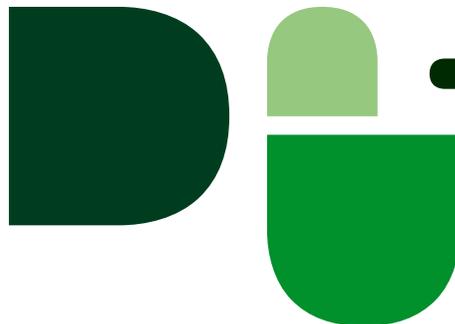

Medications can be tracked at all stages, from check in at the care home to administration. Tracking even works when unused items are disposed of or returned to your pharmacy.

Coupled with original packs or blister packaging, we make it easier for patients to adhere to their regime with pre-filled pill packs containing the right medication, in the right dose, in one blister.

Our solutions

Electronic medication administration record (eMAR) software uses patient specific barcoding, coupled with original packs or blister packaging, to automate the entire care home medication management and administration process, making it safe, simple and compliant.

Open API means you can integrate your eMAR with any electronic care planning system, allowing you to directly communicate with local care homes.

Challenges

- Medicines not administered properly
- Lack of staff knowledge
- Issues with record keeping
- Incorrectly stored medicines

Benefits

- Manage prescriptions with care homes through a direct interface
- Integrates with your PMR or works as standalone
- Lock in care home customers for up to 3 years
- NHS Compliant

Outcome

- A safe, simple and compliant eMAR system for your care home customers, generating additional revenue

ELECTRONIC MEDICATION ADMINISTRATION RECORD (eMAR)

Pearl Chemist Group automates their dispensing process

Spending more time with patients was key to Pearl Chemist Group's decision to automate medication adherence pill pack dispensing. The pharmacy provides pill packs to patients with complex medication regimes - helping them to take the right dose at the right time.

Staff were spending hours filling the packs by hand at each branch. Now, most of the pill packs are filled using automation at the Tooting pharmacy and then distributed to each branch.

“ It's allowed us to free up both our pharmacists and pharmacy technicians so they can spend more time at the counter and in the consulting room with patients. Ultimately it's helping us to provide the best possible care to our patients.”

Mayank Patel, Director & Superintendent Pharmacist, Pearl Chemist Group

Secure medication collection at Well Pharmacy

Well Pharmacy has a clear vision for how technology can support its goal of providing a patient-centric experience that fits with the convenience expected by today's consumers.

It has brought this to life by incorporating secure medication collection as part of a prescription service.

“ We've seen a much higher volume of collections happening, and that's because we've solved a specific problem in a very busy community store that permanently had queues of customers.”

Neil Stewart, Head of Essential Pharmacy, Well

Managing medication in Avery Health Care Group's care homes

Complex medication regimes and time-consuming stock check-in meant that staff at Avery Healthcare Group's 50 care homes spent lots of time managing paper-based processes.

The group made managing medication in their care homes simpler and safer by switching to cloud-based software that ensures patients receive the right dose, at the right time.

“ Our staff have really embraced the new system and we have had multiple reports detailing just how easy it is to use. Our previous systems always meant there was a risk of human error, but since we've introduced Omnicell eMAR the risk of this has been significantly reduced and our residents' safety has increased.”

Julie Spencer, Head of Care at Avery HealthCare Group

Expert services to help you automate

If you're considering automation or have decided to invest, we know this will have required weeks of planning and decision making.

Making sure the project goes to plan and provides the benefits you're looking for will be one of your top priorities, which is why we install and optimise all our automation ourselves.

This means we get to know you and your teams - helping you to navigate your journey to an automated pharmacy.

Our partnership does not end when your automation is installed.

We're on hand to provide training and support - offering hands-on technical and healthcare knowledge and guidance.

FREE weekly pill pack point of sales toolkit

If you're helping your patients by offering a weekly pill pack service, we have a digital point of sales toolkit you can download for FREE.

Email marketinguk@omnicell.com and we'll give you access

Scan here to find out more:

You can add your pharmacy name to the items in the pack which includes:

- A5 patient leaflet
- Content and images to publish on your website
- A5 leaflet to inform your care home customers that you are now offering this service
- A3 patient poster
- Social media posts and images to share across your pharmacy's channels
