

## OmniceLL Analytics

Simple and effective web-based application that saves valuable time and enables early detection of diversion.

The only diversion tool in the UK market which provides real time data.

The risk of diversion is real. A report<sup>1</sup> from 2019 disclosed that there were almost 3,000 reports of "unaccounted for losses" of controlled drugs within the NHS in England during 2018 and 2019. Identifying a reason for loss of medication can be challenging. Even with automated medication management systems in place, reviewing patterns in data can be difficult and time consuming.

As strains on the NHS increase, this identification process is more tightly pressed and staff are more focused on patient care than report running and manipulation to identify risks. Generally, in the UK identification of diversion comes very late into the problem with the potential to have been resolved much earlier.

### Simplify and Speed Up Your Diversion Detection Process with Omnicell Analytics

OmniceLL Analytics is a diversion analytics tool that streamlines the process of managing potential medication diversion across a hospital. The simplicity and effectiveness of this web-based application saves valuable time and helps enable early detection of diversion.

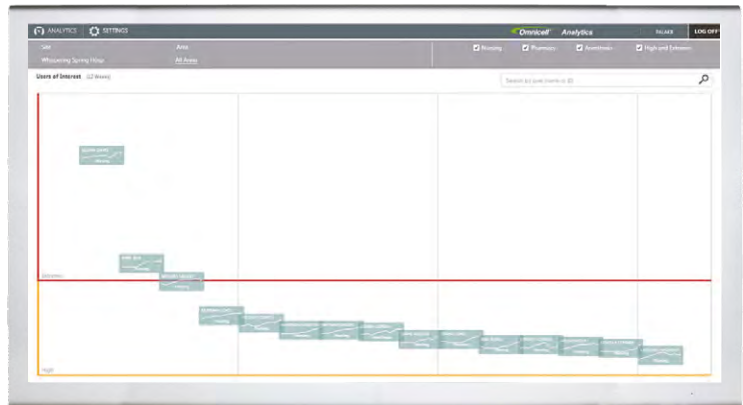

#### Benefits:

- Improves efficiencies:** Omnicell Analytics constantly runs algorithms, updating user scores weekly, based on usage and trend analysis. This allows easy sign posting for staff to review.
- Significant time savings:** Highlights usage out of the ordinary, compares this to users within similar areas and with comparable workloads. This data is processed automatically and available on dashboards at your fingertips, significantly reducing time of drug version analysis.
- User friendly system:** Omnicell Analytics creates dashboard and reports which show a comparison of peers. These are easily exportable with little to no modification needed to send to colleagues.
- Improves compliance:** Can help hospitals to achieve level 7 of HIMMS EMR adoption model.
- Improve patient safety and care:** Reduce patient risk by quickly detecting diversion incidents.

## Find Users of Interest

### Users of Interest Dashboard

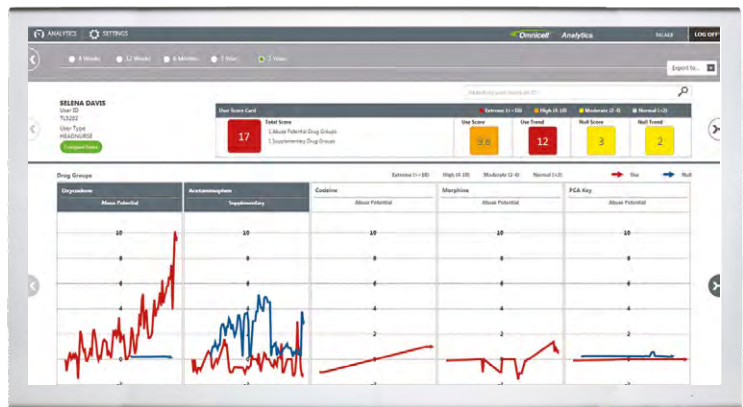

View overall scores of suspicious users based on usage, compared to their peers, across your health system. Three user types—Pharmacy, Nursing, and Anesthesia—allow more targeted investigations.

## Identify Drugs of Choice

### User Score Card & Summary

Identify a user's potential drug(s) of choice based on his or her dispensing patterns and trends. Compare a user of interest to peers in a work area to assess against other trend lines.

## Pinpoint Suspicious Activity

### Patient Care Timeline

For potential diverters identified, this timeline lists details of medication transactions by patient. If you have Omnicell's Closed Loop Dose Accountability,<sup>6</sup> the administration amount will be shown on the Patient Care Timeline along with issue, return, and waste information in a single view, saving time spent identifying variances.

Date	Time	Issue / Expiry	Drug / Med/Chg	Issue Amount	Administration	Waste	Notes
8/15/2018	11:02:00 AM	8/15/2018 11:02:00 AM	HYDROCODONE BITARTRATE 5-325mg Oral Tablet	2 Tab. 500mg	2 Tab. 500mg
