Potential savings across all sites: **816.00 GBP**

1,092 total items suggested to move, which could save this amount of money before they expire.

| Item Name  | Quantity at Current Location | Expiry Date | Suggested Action | Move to Area | Move to Site          |
|--|------------------------------|-------------|------------------|--------------|-----------------------|
| glucagon 1mg/1ml 1ml vial                                | 2                            | 29 Sep 2022 | Move to          | EMD          | Harris Point Hospital |
| HYDROcodone/acetaminophen 10mg/325mg (LORTAB) 1ea tablet | 12                           | 29 Sep 2022 | Move to          |              |                       |
| 5% dex in 0.9% NaCL 1000ml bag                           | 4                            | 29 Sep 2022 | Move to          |              |                       |

Suggested Action: Move to

## Actionable Insights

Omnicell Insights provides easy-to-understand analytics instead of complex dashboards allowing you to take action immediately.

## Context Everywhere

With Omnicell Insights, you'll never be left wondering what you're looking at. Every chart is accompanied by a clear narrative that explains what you're seeing and where to go next. Plus, the pop-out glossary ensures you understand any terms used in each story, eliminating confusion and improving clarity.

**Which ADC has the highest usage?**  
 In May 2022, medications were dispensed 10.4K times from ADCs across All Sites. The ADC with the highest usage dispensed \$49 more than the ADC with the lowest usage across All Sites.

What does this mean? ADCs with fewer monthly dispenses (e.g. CICU3 on CICU3 - CICU3) may not be being best utilised, could have a problem or require better staff training. Identify the reason and consider moving these to high usage areas.

DISCLAIMER: Your stock level set data to delete from problems after 8 years. Therefore, additional data may be present in the system.

By the end of 31 August 2022, the number of supplementary restocks had decreased by 100% from the start of the year.

The number of supplementary restocks should decrease over time because the stock levels should be stable. But what if the rate of additional to supplementary restocks? Click button below to see the trend in Supplementary Restocks.

Trend in Supplementary Restocks: (no change)

Start of automation October 10-Aug-2017

**Glossary**

- ADC**: Automated Dispensing Cabinet
- AUTOMATED RESTOCK(S)**: When an item is restocked in its location as a planned restock (i.e. this restock was triggered when the item was restocked a certain level).
- SITE**: The site (eg hospital, clinic, outpatient) that the item is located in.
- SUPPLEMENTARY RESTOCK(S)**: When an item needs to be restocked in its location before a planned restock is going to occur. This happens when the item is used more frequently than was expected and the levels of stock therefore decrease more slowly.
